Abstract:

Polskie Generalne Studium Wyborcze (Polish National Election Study) has a research formula in the field of politics sociology and political sciences. In most of democratic countries there is an institution called National Election Study. Following the decision of Scientific Research Committee (KBN), taken in 1997, Poland joined the group of these countries. Only then was Polish National Election Study (PGSW) set up and it joined international scientific circles. The research tool implemented by PGSW comprises among others of a comparative part; so called CSES module (Comparative Study of Electoral Systems) covering about 50 political systems of the countries of all continents. PGSW research covers: 1) analysis of the social and political awareness of Poles, rendered with an intensified public opinion poll conducted among a big number of participants (questionnaire research); 2) Polish parliamentary elites analysis - both their socio-demographic, as well as - mainly - their attitudes and political views 3) party manifesto research, and 4) so called, political ecology - research of regional political and electoral differences.

response rate=71.4 %

Mode of Data Collection:

In person, face-to face interviews

Weighting:

The weighting factor consists of the following parameters:

1) sex (2 categories: male and female), age (5 different categories for males and females: males: 18-24, 25-34, 35-49, 50-64 and 65 or more; females: 18-24, 25-34, 35-49, 50-59 and 60 or more), educational level (4 categories: elementary, basic vocational, secondary and higher), place of residence (4 categories: villages, cities 20000 or less, cities 20000-100000, and cities more than 100000 inhabitants) and economic activity.

2) Because of the probability of selection inside the household are inversely proportional to the number of adults in the household another procedure was implemented to correct such an unequal probabilities by weighting the results by the number of adults in the household.
