STUDY DESCRIPTION

Nipothese was conducted by the Netherlands Institute for Public Opinion, Amsterdam in 1966 and 1967. ICPSR obtained the data from the Steinmetz Archive, Amsterdam (Steinmetz study number is P0036).

The sample consisted of the population of the Netherlands over the age of 21. The 8268 respondents were asked about their voting intention in the parliamentary election held on February 15, 1967. Also explored were the respondents' affinity to political parties; images of political parties; necessary qualities of political leaders and trust in political leaders.

SAMPLING INFORMATION

No sampling information is available from ICPSR at this time.

CODEBOOK INFORMATION

The codebook contains the deck and column location for each variable in the left margin. This is followed by the question number and by a brief label describing the content of the variable. The questionnaire following the codebook should be consulted for the complete question text. Missing values indicate appropriate values to be specified as missing data in analysis programs. Following the phrase "value labels" are the codes for the variable.

There are no blanks in the data. When only a units digit is given in the codebook for a two digit variable it has a lead '0' in the data.

FILE STRUCTURE

The data are available in card-image format. There is one deck of data for each of the 8268 respondents.
