Here's how it works. If you don't know too much about a group, or don't feel particularly warm or cold toward them, then you should place them in the middle, at the 50 degree mark.

If you have a warm feeling toward a group, or feel favorably toward it, you would give it a score somewhere between 50° and 100° depending on how warm your feeling is toward the group.

On the other hand, if you don't feel very favorably toward some of these groups--if there are some you don't care for too much--then you would place them somewhere between 0° and 50°.

Our first group is the farmers. Where would you put them on the thermometer?
